USER INTERFACE DESIGN

NAME: VARNIKA V

REGISTRATION NO:240701578

BAD WEBSITE:

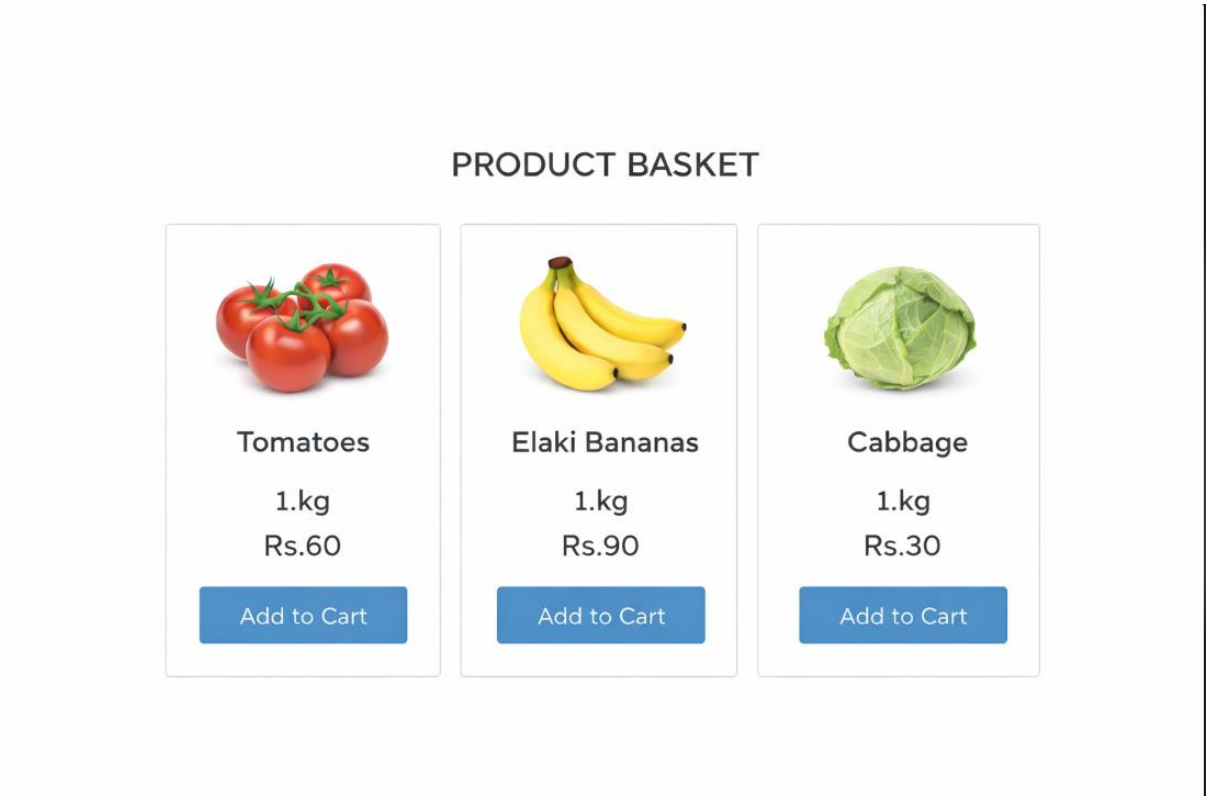
BAD WEBSITE DESCRIPTION:

The bad website has a **poor and visually unappealing design**. The layout lacks proper alignment and spacing, which makes the page look cluttered and unorganized. The grocery product images are placed without balance, and their presentation does not attract the user's attention.

The background color is too strong, resulting in **poor color contrast** and visual discomfort. The typography is inconsistent, with no clear visual hierarchy to differentiate important elements such as the product name and price. Due to the lack of emphasis and structure, users may find it difficult to focus on key areas of the page.

Overall, the design does not follow basic **UI design principles** such as visual hierarchy, consistency, spacing, and aesthetic appeal. This leads to a confusing and unpleasant user experience.

GOOD WEBSITE:+



GOOD WEBSITE DESCRIPTION:

The good website has a **clean, simple, and visually appealing design**. The layout is well organized, with grocery product images neatly arranged in individual sections, making the page easy to scan and understand. The website title is clearly displayed at the top, giving a clear identity to the page.

The typography is **consistent and readable**, with proper font sizes and spacing that improve clarity. Important details such as the product name, quantity, and price are clearly visible and well aligned. The background color is subtle and balanced, providing good contrast and enhancing the overall visual appeal.

The “Add to Cart” button is clearly visible and placed consistently across all products, making user interaction easy. Overall, the design follows good **UI design principles** such as alignment, consistency, visual hierarchy, and simplicity, resulting in a smooth and user-friendly experience.

Difference Between Good Website and Bad Website

- The bad website has a cluttered and visually unbalanced layout, whereas the good website has a clean, simple, and well-aligned layout.
- The bad website lacks proper visual hierarchy, making it difficult for users to know where to focus, while the good website clearly highlights important elements such as the product name, quantity, price, and action button.
- The bad website uses inconsistent typography and irregular spacing, which affects readability, whereas the good website uses consistent fonts and proper spacing for better clarity.
- The bad website uses strong or inappropriate background colors that reduce visual comfort, while the good website uses a soft and balanced color scheme that improves visual appeal.
- The bad website presents product images poorly, without proper alignment or emphasis, whereas the good website displays product images clearly and attractively.
- The bad website has a weak or unclear call-to-action, while the good website includes a clearly visible and well-placed “Add to Cart” button.
- Overall, the bad website creates confusion and reduces user engagement, whereas the good website provides a smooth, user-friendly, and pleasant experience.
